

PIONEER®
92-102 CRM

FIELD PROVEN. YIELD PROVEN.

- Offensive/versatile early 90-day product that raises the bar with more yield and better trait options.
- Acceptable agronomic package and yield make this a great plant first harvest first product for those trying to capture an early market or anyone that absolutely needs dry corn to put in the bin out of the field.
- Strong stress emergence and outstanding drought tolerance (AQUAmax) will provide stability across environments.
- Strong brittle tolerance, roots, and exceptional early emergence. Great replacement option for P9492.
- Available as PowerCore and Vorceed

- Very well-rounded agronomic package including above average stalk strength, mid-season brittle stalk and root strength.
- Strong drought tolerance. Stout disease package specifically, Northern corn leaf blight and tar spot tolerance.
- Very good late season plant health with above average stalks and late season intactness.
- Good drydown with heavy test weight.
- Available as AM and Qrome

- Solid agronomic package coupled with high-yield potential. (White Cob)
- Strong brittle snap tolerance with good root strength.
- Very good staygreen and late-season plant intactness.
- Consistent emergence in varying soil types.
- Available as PowerCore and Vorceed

- Optimum AQUAmax Hybrid. Exceptional drought tolerance while delivering top-end yield in optimal growing conditions.
- Very good root strength and mid-season brittle snap tolerance.
- Strong Late season stalk strength and staygreen.
- Available as AM, Qrome.

- Strong agronomic characteristic package highlighted by above average root strength, stalk strength and mid-season brittle snap resistance.
- Solid drought tolerance with good drydown. Good late season intactness. Fungicide candidate: weak foliar disease - tar spot, gray leaf spot.
- Available as PowerCore and Vorceed.

- Top end performer with Optimum® AQUAmax® that provides exceptional drought tolerance while still delivering top-end yield potential in optimal growing conditions.
- Strong stalk and root strength. Very good emergence and early season vigor.
- Available as PowerCore and Vorceed

- Leader hybrid delivers a combination of top-end yield performance and strong agronomics.
- Adapted for a wide variety of environments with good stability.
- Above average root strength, mid-season brittle snap tolerance and late season stalk strength.
- Available as Conventional, PowerCore, Vorceed.

- Offensive product with high yield potential with excellent brittle snap tolerance and good root strength.
- Very good staygreen and Northern corn leaf blight resistance.
- Very vigorous and handled wet feet early in 2024. Better late plant health than P9955.
- Available as PowerCore and Vorceed.

- High yield potential 102 CRM product with strong agronomics including excellent root strength and above average stalk strength and mid-season brittle snap resistance.
- Excellent staygreen and foliar disease package; tar spot and Northern corn leaf blight.
- Available as Conventional, PowerCore, Vorceed.

PIONEER®
103-113 CRM

FIELD PROVEN. YIELD PROVEN.

- Impressive yield potential, with good all-around agronomics and a solid disease package.
- Stable root and stalk strength with very good brittle snap resistance.
- Good stress emergence for uniform stands and early planting. Moderate plant height with lower ear height.
- May have high response to foliar fungicide to help late season plant health with weaker disease package; die and dry type.
- Available as PowerCore and Vorceed

- Performance leader hybrid with strong yield potential.
- Solid all-around agronomics including good root strength, brittle tolerance and late-season stalks.
- Excellent drought tolerance for versatility across acres.
- Available in Conventional, PowerCore Enlist and Vorceed Enlist.

- Leader hybrid with a strong agronomic package.
- Dependable all-around agronomics including good mid-season brittle tolerance and late season stalk strength.
- Moderate stature plant with lower ear height and strong root strength.
- Available in Vorceed Enlist.

- Versatile hybrid that brings strong performance and good all-around agronomics.
- Good agronomics and a solid disease package. Very good mid-season brittle tolerance.
- Strong drought tolerance for moderate to tougher acres.
- Strong roots and stalks make this an attractive product for tough acre. Good grain quality and test weight.
- Available as Vorceed and Conventional

- Versatile hybrid with high yield potential, solid agronomics, and stability across variable environments.
- Average plant and ear height with good disease package.
- Strong mid-season brittle tolerance.
- Excellent stalks and late season intactness.
- Available in AM.

- Industry leading yield performance along with very good agronomics and disease tolerance allow for multiple environment placement.
- Great stalk integrity and strong roots make it a great choice for high productivity acres.
- Impressive foliar disease package with excellent tar spot resistance.
- Good drought tolerance provides consistent performance across variable soil types.
- Available as PowerCore, Vorceed, and Conventional.
